

Summary
by
Wes Traub

The sense of the community, as expressed at this meeting is that:

- We agree with the recommendations of the ExoPTF regarding detection and characterization of Earth-like exoplanets.
- To enable the recommendations of the ExoPTF we advocate that:
 1. A series of probe-scale missions for exoplanets be planned.
 2. The first exoplanet probe mission should be an astrometric one, as recommended by the ExoPTF.
 3. The 2nd & 3rd exoplanet probe missions should focus on characterization.
 4. A flagship exoplanet mission should be planned as soon as the budget can support it.
 5. International partnership should be pursued to enable scientists from many nations to participate and to reduce the cost per nation.
 6. An aggressive exoplanet program of technology development, ground-based observations and theory should be pursued.
